

Soil Types Common Within Echinacea Remnants and Their Characteristics

investigating ecology and evolution in fragmented prairie habitat since 1995

Goals:

- Understand how Google Earth, R Studio, and Soil Web can be used together
- Learn the different soil types within the Echinacea sites
- Learn some characteristics and differences between the soil types

Sites

- Around Landfill
- North Landfill
- Steven's Approach
- Staffanson Prairie
- Nessman
- Townhall
- Aananson
- East Elk Lake Road

```
#plotKML(mapp4)
#plotKML(mapp5, colour_scale=rep("#00FF66", 1), points_names="")
```

Plot KML

```
library(plotKML)
library(s2)
library(leaflet)
```

- Downloadable package for R Studio
- Allows you to convert CSV files to points on Google Earth

```
les17")# function mapname)
```

```
)
```

```
aa <- MapSpatialObject("phen.2017-aa-2017-07-05.csv")# AA
plotKML(aa)
```

```
plotKML(MapSpatialObject ("phen.2017-aa-2017-07-05.csv"))#AA
```

```
plotKML(MapSpatialObject("phen.2017-alf-2017-07-05.csv"))#ALE
```

Google Earth Pro

- Downloadable program similar to google maps
- Allows you to create places, routes, and measure sites
- Is compatible with other applications such as Soil Web

Soil Web

- Downloadable application for Google Earth Pro
- Created by the University of California - Davis
- Shows the soil types and boundaries for anywhere in the United States
- Includes horizon and other information on the components of the soil you click on

Soil Formation Factors and Orders

- 1) Parent material (till and outwash)
- 2) Climate
- 3) Lay of the land - slope, hills etc...
- 4) Organisms that live within the soil
- 5) The length of time the previous factors have interacted

- Mollisols
- Alfisols
- Inceptisols
- Entisols
- Histosols
- Spodosols
- Vertisols
- Andisols
- Aridisols
- Gellisols
- Oxisols
- Ultisols

Soil Taxonomy

- 1) **Order**- determined by horizons and materials
- 2) **Suborder**- determined by factors that influence the vegetation, moisture
- 3) **Great group**- parent material, soil temperature, and moisture
- 4) **Family**- based on numerous chemical or physical properties
- 5) **Series** - color, texture, structure

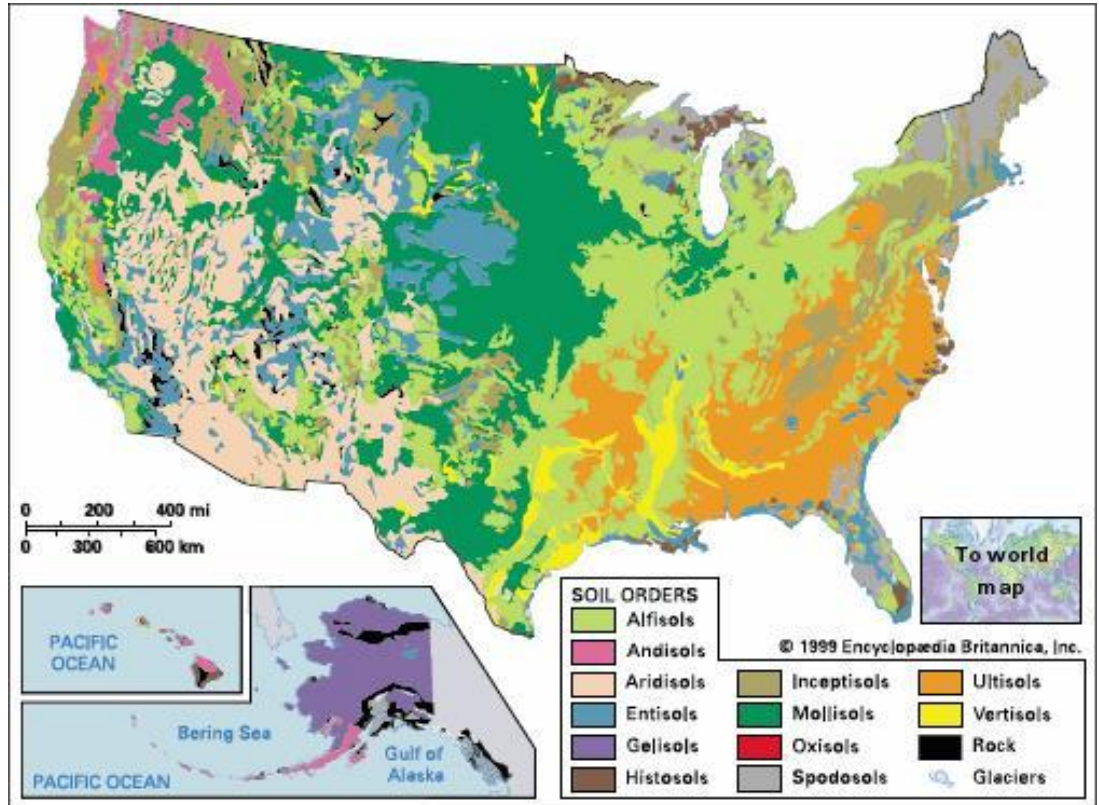

Soil Characteristics

- Soil Codes
- Horizons
- Organic Matter
- Cation Exchange Capacity
- Erosion

Minnesota Soil

- Minnesota has 7 of the 12 soil orders
- Mollisols is the order of prairie soil
- Dark colored, high nutrient, soft soil
 - Three Suborders
 - 1) Aquolls- wet (12.7%)
 - 2) Udolls- moist (12.7%)
 - 3) Ustolls- dry (0.04%)

Types of Soil in Remnants:

- BaC2
- LeF
- BaB2
- LgD2
- 903B
- 942D2
- SoE
- 220E
- 942C2

	Percentages											
	Soil types											
Site	942D2	220E	LeF	903B	BaC2	942C2	LgD2	BaB2	SoE	totalPlas	Total % plas	
Around Landfill	0.08	0.03	0.42	0.47							66	0.21
North of Landfill					0.93	0.07					44	0.14
Steven's Approach					100						32	0.1
Staffanson Prairie			0.49		0.33		0.11		0.07		70	0.23
East Elk Lake Road					0.55		0.31	0.14			29	0.09
Nessman								100			7	0.02
Aaenson					0.87		0.13				54	0.21
Townhall								9			9	0.03
Total	5	2	62	31	159	3	24	11	5		311	
Total %plas in type	0.02	0.01	0.2	0.1	0.51	0.01	0.08	0.04	0.02			

BaC2

- 6-12% slopes
 - Gentle slopes-rolling hills
- Moderately eroded
- Well-drained
 - 50% Barnes
 - Fine-loamy
 - 31% Buse

LeF

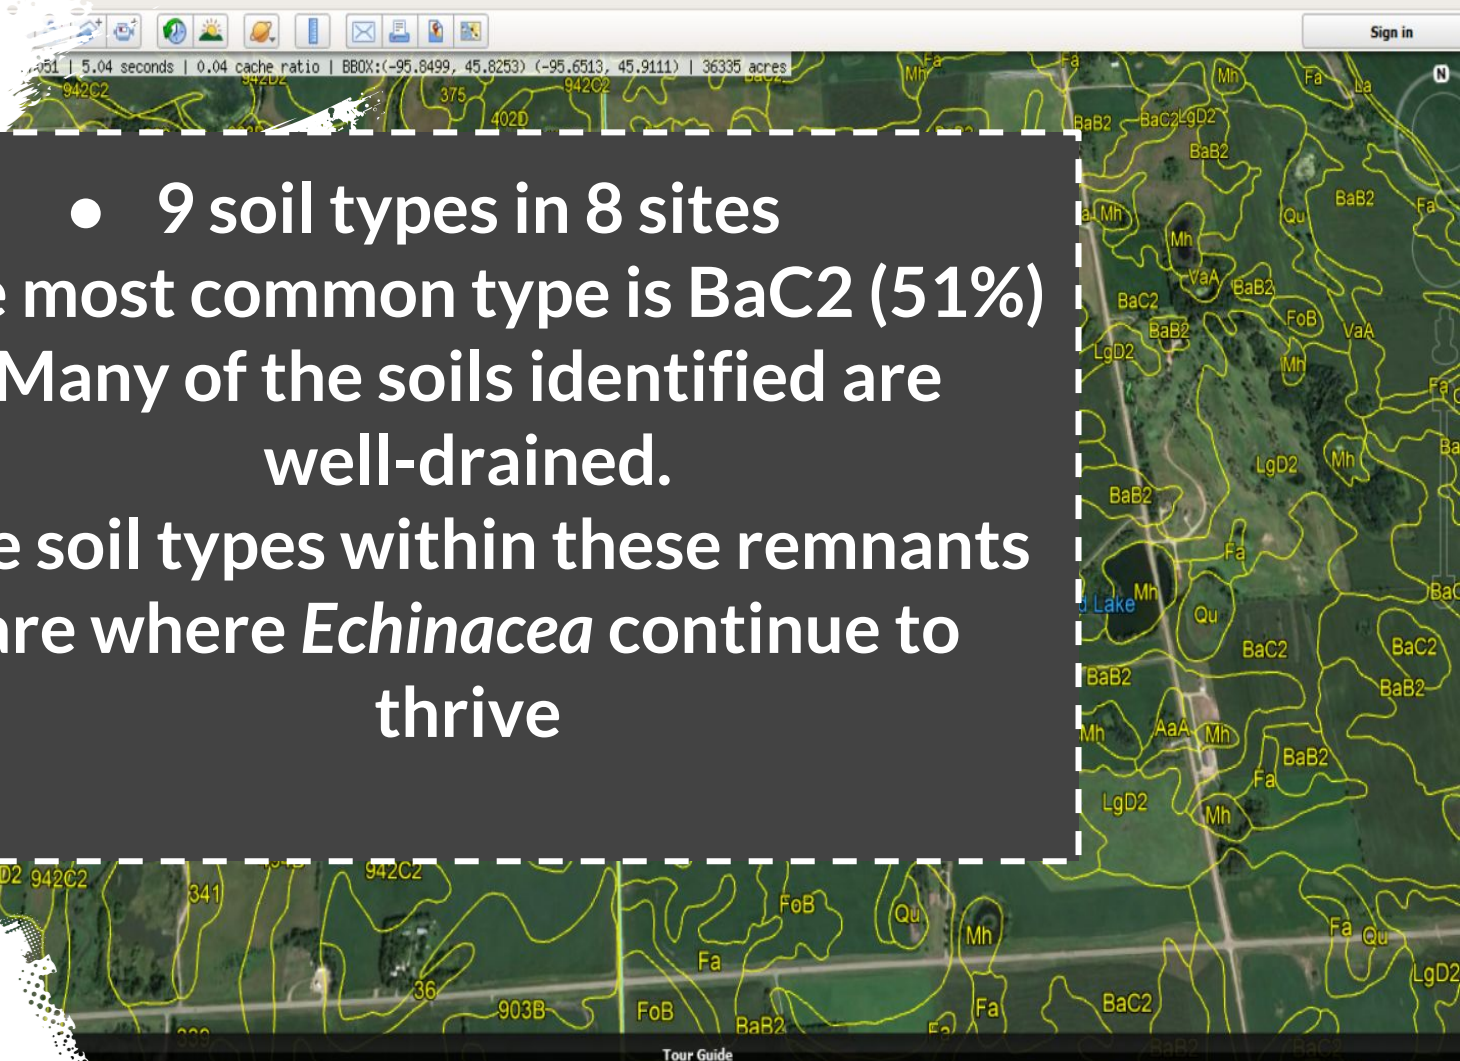

- 40% slopes
 - hilly
- Well-drained
 - 80% Langhei
 - Fine-loamy
 - 10% Barnes

903B

- 2 - 6% slopes
 - Gentle slopes
- Well-drained
 - 55% Hokans
 - Fine-loamy
 - 23% Buse

- 
- A topographic map showing soil types across a landscape. The map features yellow contour lines and various soil type labels such as BaC2, BaB2, Mh, VaA, FoB, LgD2, Qu, and Fa. A road is visible on the right side of the map. The map is overlaid with a semi-transparent black box containing a bulleted list. At the top of the map, there is a toolbar with various icons and a status bar with technical data. At the bottom, there is a 'Tour Guide' label.
- 9 soil types in 8 sites
 - The most common type is BaC2 (51%)
 - Many of the soils identified are well-drained.
 - The soil types within these remnants are where *Echinacea* continue to thrive
